## **INSTALLATION STEPS**

- 1) Apply a strip of tape to the surface of rear body panel to represent the bottom edge of bumper fascia. This is used to assure receiver clears the bottom of bumper fascia when installed.
- 2) Temporarily remove complete rear bumper assembly. From inside trunk, remove two bolts per side securing bumper to body. Remove screws retaining fascia at rear of wheel opening. Release fascia from clips at side of car by pulling up and out. Some models require the bumper assembly to be pushed forward on car 2-3" and pulling fascia outward. Bumper assembly will slide to rear.
- 3) Position hitch on center of vehicle and level the assembly. Based on application this hitch will mount 6 1/2" to 7 1/2" down from body lip. (Note: Check receiver height at tape mark for fascia clearance. Adjust hitch position if necessary. Using hitch as a template, mark and drill holes for fasteners. Four in rear body panel and four in tire well.
- 4) Install fasteners as shown then torque all 3/8" fasteners to 45 lb-ft . (Note: Large fender washers go inside tire well.)

## PERIODICALLY CHECK THIS RECEIVER HITCH TO ENSURE THAT ALL FASTENERS ARE TIGHT AND THAT ALL STRUCTURAL COMPONENTS ARE SOUND.
